

SearchAmerica Chooses Endpoint Protector 2008 to Safely Handle Portable Storage Devices and Critical

Tuesday, 22 April 2008

Endpoint Protector 2008 Offers an Efficient Solution for Data Loss Prevention (DLP), Preventing Data Theft and Other Forms of Data Leakage

CoSoSys, the leading provider of End Point Security solutions, announces that SearchAmerica has selected Endpoint Protector 2008 to manage and enforce portable device security policies in their IT environment. PC users perform an increasing number of tasks employing portable storage devices in their everyday work due to the added comfort and productivity, thus stressing the need to eliminate the inherent risk of data leakage entailed by these devices.

Endpoint Protector 2008 efficiently protects SearchAmerica workstations, notebooks and servers against data loss, data theft and other forms of data leakage. "Endpoint Protector 2008 gives us the ability to manage the controlled use of USB devices, external hard drives, FireWire devices, CD/DVD-Readers/Writers and many other potentially harmful endpoint devices, while also stopping malware, viruses and other unwanted data intrusions" said Carl Bigby, Network Security Manager from SearchAmerica.

Endpoint Protector 2008 additionally monitors and records all data transferred to and from portable storage devices at the organization's endpoints. This feature gives SearchAmerica IT administrators the possibility to trace all data transfers to and from removable storage and endpoint devices. In case data is deleted before or after being transferred to a portable storage device, a copy of the data is stored onto a network storage server. The information stream at the network's endpoints is thoroughly recorded, thus supporting audits of data flow and controlling the impact of data leakage.

"Legislative requirements such as HIPAA call for the proactive management of portable devices that are capable of storing medical records. Enforcing encryption of data in transit on portable devices to prevent possible loss is another important feature that Endpoint Protector 2008 offers," said Roman Foeckl, Managing Director of CoSoSys. "This set of features enables organizations of all sizes to better comply with government regulations and industry standards regarding data breach management and IT governance."

About CoSoSys

CoSoSys SRL specializes in network endpoint security and software development for portable storage device enhancement. The application portfolio includes functions from encryption, biometric security, data synchronization and network security. CoSoSys distributes its products globally through world's leading hardware manufacturers, software Distributors, Resellers and directly to users at www.cososys.com. CoSoSys enjoys a continuously growing installation base of users worldwide. The company is headquartered in Cluj-Napoca, Romania and has sales representatives in the United States, Germany and Asia.

About SearchAmerica, Inc.

Founded in 1994, SearchAmerica is the industry leader in financially clearing patients through address verification, prediction of payment and automated charity/Medicaid processing. It provides a complete range of real-time, integrated products that are used by more than 900 hospitals to improve their revenue cycles. SearchAmerica's quality and accuracy is best in class and healthcare providers benefit from smarter data which produces a healthier bottom line. Documented case studies prove a significant return on investment, consistent with favorable public relations. SearchAmerica is headquartered in Maple Grove, Minnesota.
